

The new HD-Generation

The Retro-Fit action of Hunger changes your „old“ machine in a „young“ one

(only VDS2.3E to VDS2.5E and VD4E)

Your advantage:

- *Worldwide application range due to a power supply that works with a flexible supply voltage (100-300VAC).*
- *The heaviest part, the power supply unit, is much lighter (- 30%, only VD4E), so your service team will enjoy their work much more.*
- *Through our Retro-Fit promotion, you receive a top fit and significantly cheaper device than a comparable new device (Price saving compared to a new machine up to 46 % depending on the basic machine).*
- *More powerful motors and a more efficient control system with compensation lead to a more powerful machine and thus to a better work result (50% higher power transmission when turning).*
- *Ecologically sensible, as only the necessary parts are replaced.*

You can continue to use the accessories you already have.

We renew your machine at a fixed price. (Excluding repairs)

Please feel free to contact us.
