

DP1 Vacuum Test Kit

Handling:

Connect vacuum tester to an air pressure of about 6 bar and use suitable adapter plate to connect the suction inlet of the tester to the respective valve port.

Actuate air pressure supply switch and observe the reading of the vacuum gauge. If the reading is in the green range, there is no leak in the entire valve train (valve, seat, stem and guide).

Application:

Engines of motorcycles, cars und commercial vehicles

Order information:
